Reason for Allowance

Figure 3 of Liu (US Pat. 6,160,723) shows a driver circuit comprising a charge pump including a plurality of stages (356, 358) including storage devices and switching devices and feedback signals showing the states of the charge storage devices. However, the prior art reference of records fails to teach or fairly suggest a driver circuit comprising: a phase generator for generating control signals for controlling the charge storage devices and the switching devices and for receiving the feedback signals including feedback signals that indicate a state of each switching device wherein, the phase generator provides control over the timing of charging of each charge storage device and the switching of each switching device such that the phase generator outputs the second control signal to switch the switching device of a particular stage to an on state only after the feedback signal for the particular state indicates the termination of charging of the charge storage device of the particular stage as called for in claim 11. Therefore, claims 11, 12, 17 and 18 are presently allowed.
